Levi GOLDSCHMIDT 1er 7

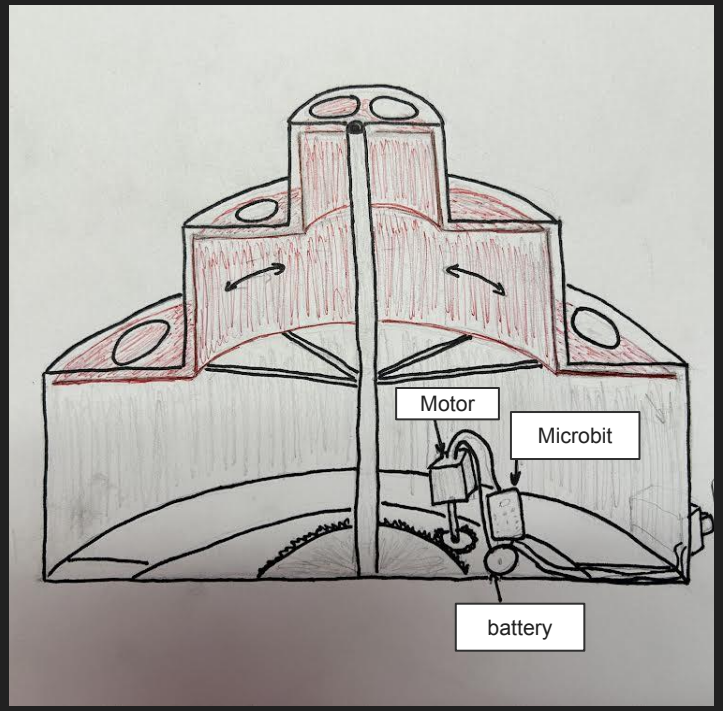

The ArchiMystery

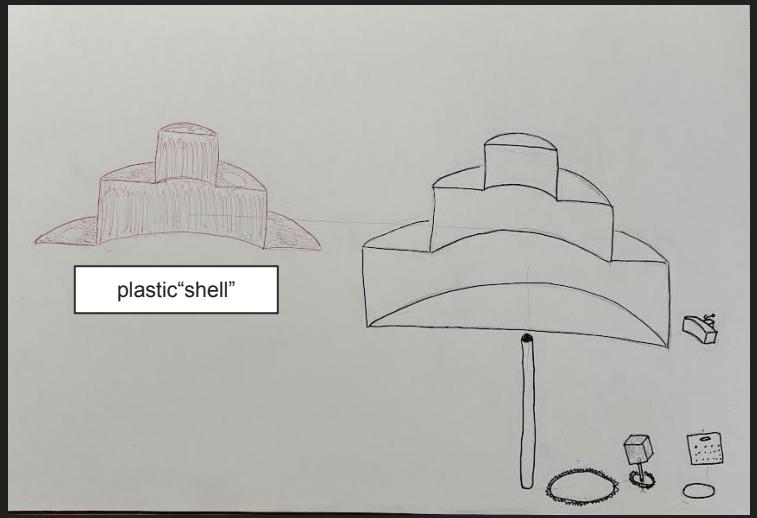

This game represents a city with a lot of buildings

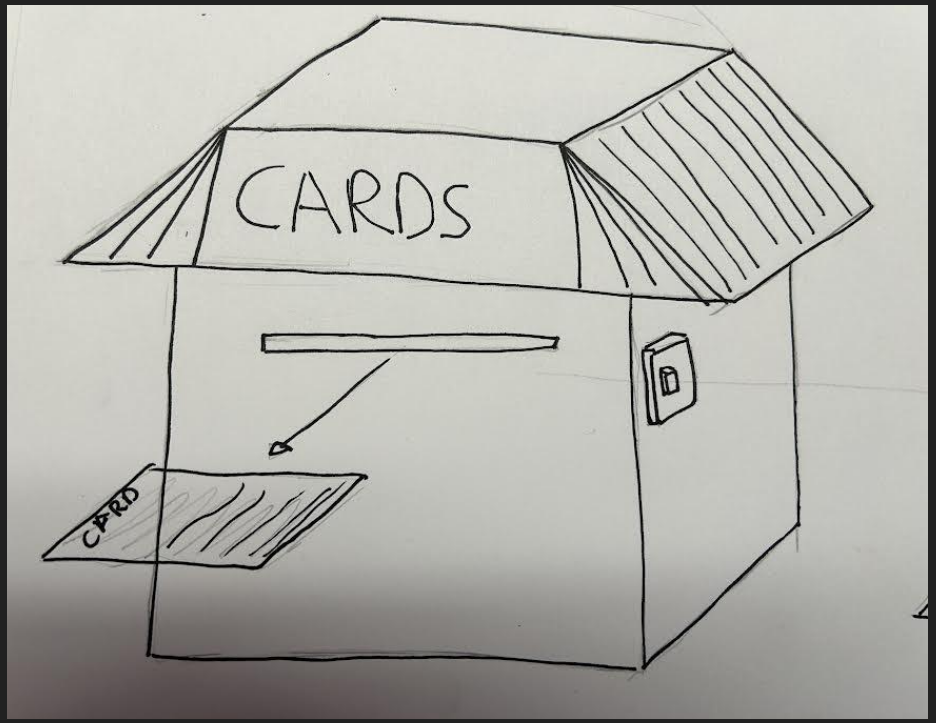

Technical

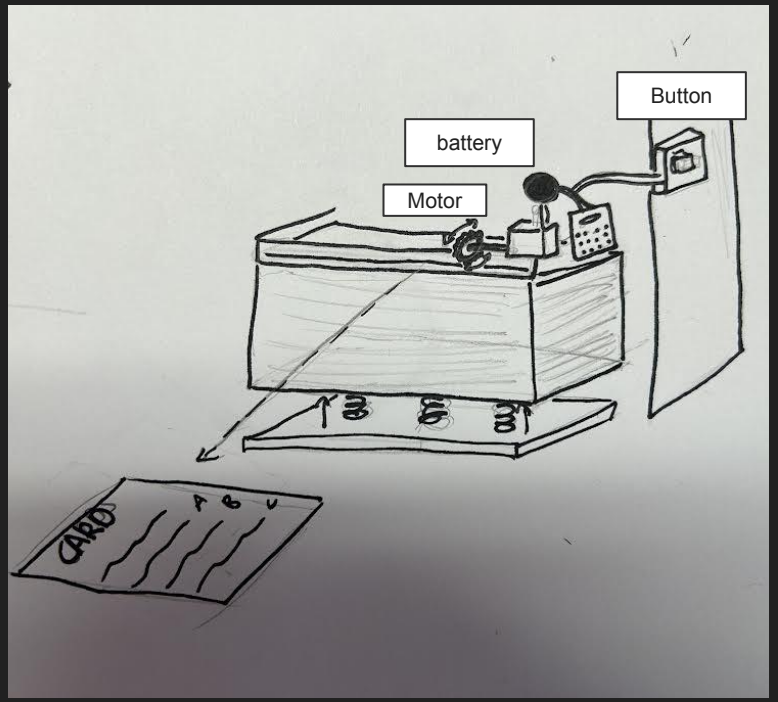

Here is the "earthquake" system that creates holes from somes slots. When a player presses the button, it activates the stepper motor with a small gearwheel that rotates a larger gearwheel to which a plastic "shell" is attached, conforming to the shape of the game board. Each time a player operates the system, some slots will be covered, while others will be opened. This adds an element of surprise and humor to the game.

The House

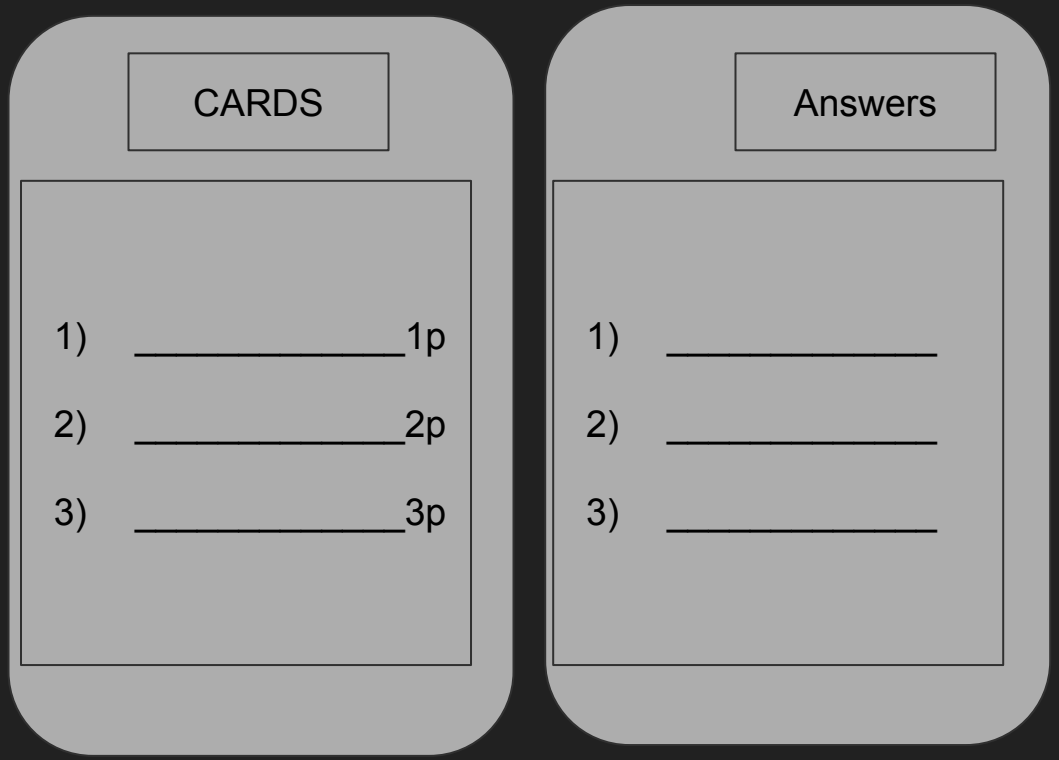

The cards are placed in this box called the house through an opening located at the back of the house.

Here is the system in the "House." Every time a player presses the button, a random card is expelled from the "House." This is through a clever motorized system that rotates a gearwheel to eject the card out side . With the springs that raise the stack of cards, the "House" will always be ready to give cards to the player.

The rules

Goal : The first player to reach the top slot of the Tower wins.

Age: From 7 to 77 years old.

Number of players: 2 to 4.

Rules: Each player has 3 game pieces. The first player must draw a card and answer a question. If the player answers correctly, they can move forward by the number of points they earned with the question. Keep in mind that some cards are "Mystery" cards. If a player draws one of these cards, they must press the button, triggering an earthquake. Some slots on the game board will transform into holes. If a game piece falls into one of these holes, it is permanently removed from the game, and the player must choose another game piece. Players have only 3 game pieces, so if all three fall into holes, the player is eliminated.

Educational goal : The game is designed to teach various aspects of architecture, including the history of historic buildings, different building categories, laws, and physical and technical formulas. It covers a wide range of architectural topics. With this game, players can have fun and can learn many things about architecture .
