TEAM IDENTITY

THE AERIS STORY

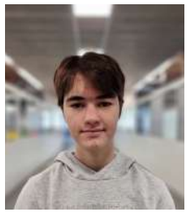

The Aeris team is heir to a **tradition of excellence** that began at the Lycée Jean-Mermoz. Before us, Dynamis Racing (2023) and Solarity Racing (2024) had already proudly taken the school all the way to the world finals. Each team has written its own history, developed its own **identity**, **methods** and **techniques**, and Aeris is now part of that continuity. Our adventure began in September 2024, when eight friends with a passion for engineering and a desire to **challenge themselves** joined forces.

In just a few months, this **ambition** and **team spirit** enabled us to win the national finals and qualify for the 2025 world finals in Singapore. Like any adventure, ours has evolved: five members have had to devote themselves to their studies, and Aeris has had to reinvent itself.

A new member joined us: **Maxime SUTTER**, a member of our school's **Foehn Racing** team, with whom we had developed a technical and visibility **partnership**. As a result, Aeris has become a closer-knit team, more determined than ever to take the project to the next level.

Heir to a tradition of excellence, Aeris has found its own way and developed its own methods. This portfolio traces its **history**, and above all the **practices** and **tools** we have put in place to make this project an **adventure on a much larger scale** than our own: corporate communications, visual identity, graphic content and publications.

OUR TEAM

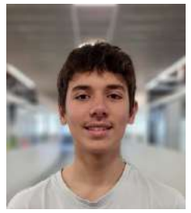

Kaéna TRENCHANT
Roles: Team Leader and CAD Engineer
Missions: Coordinate the team, track tasks and deadlines, facilitate internal communication, design 3D parts, optimize mechanical resistance, prepare files for simulation and manufacturing
Qualities: Rigorous, Organised, Motivated, Curious
Mastered software: OnShape, Arduino, Python

Maxime SUTTER
Roles: Sponsorship/Partnerships Manager
Missions: Identify potential partners, manage outreach and negotiations, ensure visibility for sponsors, maintain long-term relationships
Qualities: Sociable, Daring, Persistent
Mastered software: Canva, CapCut, LinkedIn

Matteo BIETH-DARSTEIN
Roles: R&D Engineer
Missions: Conduct technical research, develop and test innovations, optimize aerodynamics, validate performance through simulations
Qualities: Creative, Rigorous, Ingenious, Passionate
Mastered software: Blender, Ansys Fluent, OnShape

Lévi GOLDSCHMIDT
Roles: Social Media and Manufacturing Manager
Missions: Management of social networks (content creation, animation, promotion of success stories) and supervision of production (prototyping, quality, final production).
Qualities: Multi-skilled, Reliable, Team spirit
Mastered software: Affinity Designer, Instagram

OUR FORMER TEAMMATES

Aeris would be nothing without our **former team-mates**. They helped build the team's image and each of them brought their own touch to the team, whether in terms of identity, operation or technique. Even after they left to concentrate on their studies, they made the **transition easier** and **passed on their work** to the new team.

Louise MOLLE
Artistic Director

Marwan ABDALLAHI
Manufacturing Manager

Max KIEFNER
Team Leader

Eden MANFREDI
Head of Finance

Enis KANOUNI
Social Media Manager

OUR NAME

Aeris comes **from the Latin word aer**, meaning "air", a symbol of fluidity and aerodynamics. After considering several ideas, including Aerion, this name was chosen for its **modern** and **innovative** image. It reflects our values and our desire to **push the boundaries**.

OUR VALUES

To ensure the cohesion of our team and remain aligned on the same objective, we have defined **three values** that embody Aeris. These values guide our work and the **image we convey** to the public, particularly through our **networks**.

OUR COLORS

We chose **four colours**: two primary and two secondary. They reflect our values while ensuring a **consistent visual identity**, good contrast and a unique aesthetic. Their selection took into account several constraints: legibility on different media, complementarity and visual impact.

#253364 Dark blue, inspired by **Sèvres blue**, is a shade created during the reign of Louis XV, adorning the famous Sèvres porcelain.

#318ce7 Thus, light blue, also called **French Blue**, echoes the iconic color that all **French motorsport teams** were required to wear from the early 20th century until 1968.

#b8860b Dark gold, on the other hand, creates a contrast with the **energy of light** yellow and represents humble **excellence**. It reflects a thoughtful team, carried by a color that is both **mature and imbued with wisdom**.

#ffd700 Light yellow symbolizes our **enthusiasm**, **determination**, and **dynamism**. Like the gilding on the moldings of the Palace of Versailles and 17th- and 18th-century constructions, this color evokes the **experience** we have gained.

OUR LOGO

A logo is above all the **symbol of an identity**. So we paid particular attention to it. Its creation was the fruit of many **iterations** and **exchanges between members** of the team and those around us. We built it around symbols that define us: the **A for Aeris**, **fluid shapes** that inspire the air, and a **leaf** that recalls our commitment to sustainability and eco-responsibility.

1st iteration: three symbols present (A, airflow, leaf), airflow not very legible, leaf not very recognisable.

4th iteration: airflow better represented, illustration of our region added, difficult to recognize internationally, leaf symbol missing

9th iteration: leaf highlighted (size and position), airflow poorly represented, logo too minimalist and generic.

12th iteration: leaf and airflow clearly identifiable, logo too complex and less memorable

TEAM IDENTITY

14th iteration: balance achieved, symbols clear and legible, airflow stylised, leaf recognisable, logo harmonious and memorable that define us: the **A for Aeris**, **fluid shapes** that inspire the air, and a **leaf** that recalls our commitment to sustainability and eco-responsibility.

From the main logo, we have created a family of **derivative logos** adapted to different contexts. Each version retains its proportions and key elements, but **varies in colour** (black, yellow, white, etc.) or contrast to ensure that it can be read on all types of media and documents.

GRAPHIC IDENTITY

Our graphic identity is based on **three elements**: a **flame**, a **fingerprint** and **clean lines**. The flame, the most commonly used, embodies our **energy** and **motivation**. The fingerprint, often used in environmental sections, underlines our identity and our focus on **sustainability**. Combined with our colour palette, these elements make our identity instantly **recognisable**, even without a logo.

OUR UNIFORMS

During the competition, our uniforms reflect the **team's identity** while **promoting our sponsors**. We have designed them to be as professional as possible. The placement of the sponsors has been **strategically** thought out: the main ones are clearly visible, while the others are placed in appropriate positions to ensure balanced visibility in all the photos and videos of the event.

OUR MERCHANDISE

We have designed and produced our merchandising to meet two objectives:

- **develop** and **promote** our **image on a regional scale**
- **help finance** the costs associated with the world finals

Four products have been created in an **eco-responsible way** in **partnership** with a local company: “Le tissu social”.

	T-shirt 1	T-shirt 2	Nylon bag	Cap
Costs (€)	12	12	4.5	9
Income (€)	21	21	8	15
Quantity	28	23	9	12
Total (€)	252	207	31.5	72

OUR PIT DISPLAY

The Pit Display is our **team's showcase** at the event. It is therefore essential that it is **professional**, and above all, that it reflects both our **identity** and our **values**.

The entire development of the pit display can be broken down into four phases:

1. **Consideration of constraints** (dimensions, budget, transport, assembly time, environmental impact)
2. Initiation of **concepts and ideas**
3. **Detailed technical design** (CAD of the stand, design of covers adapted to the model)
4. **Production** of the model

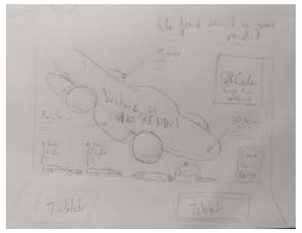

1.Consideration of constraints

- The first aspect to consider when developing a stand is the **space** it can occupy. In our case: 295 cm wide, 240 cm high and 95 cm deep. To be on the safe side, we subtracted 4 cm from each dimension to ensure that the stand **would fit** even if the measurements provided by STEM Racing HQ turned out to be approximate.
- We then carried out a **price survey** for a stand of these dimensions, contacting **local associations** and **point-of-sale advertising companies**. This enabled us to estimate the cost at €800. To be on the safe side, we **set the budget at €1,000**.
- Before booking our plane tickets, we looked **into shipping options** to Singapore, more than 10,000 km away. In the end, we opted for **cargo transport**, which presented the **main challenge**: the stand had to be shipped in 12 packages weighing less than 180 kg in total, with each package measuring no more than 158 cm (width + height + length).
- As assembly time was limited to two hours, we had to design a stand that **could be put together quickly**.
- Finally, we sought to **limit our environmental impact**. As transport is inevitably the most polluting part of the process, we reduced its footprint by taking it with us on the plane and reducing our other luggage rather than using a carrier. We therefore chose to focus instead on the impacts related to the production of the pit display.

2.Initiation of concepts and ideas

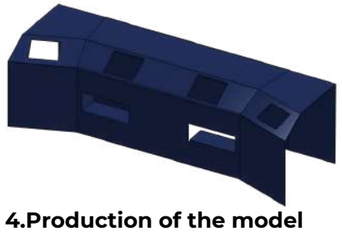

With the help of **Louise MOLLE**, our former artistic director, we came up with some initial ideas for the pit.

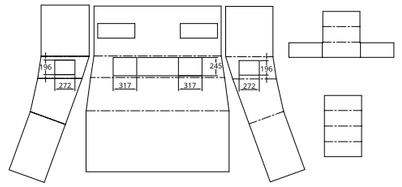

Each member was able to contribute their ideas **through sketches** and **visual exchanges**, which enabled us to decide to integrate **interactive tablets** with animations and presentations, as well as our **wind tunnel**, in order to capture the public's attention and reflect our team's unique identity.

3.Detailled technical design

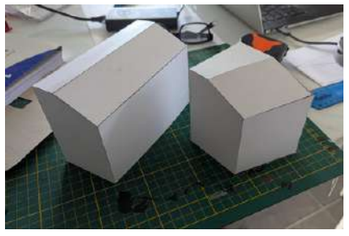

During this stage, we designed the stand in detail, and more specifically its **POS structure**, modelled on OnShape to obtain a flat model once unfolded. This enabled us to **visualise the integration** of each element in concrete terms, and to guarantee **optimal use**. For example, the shelves were positioned to be **accessible to users**. We also designed the covers ourselves to ensure that they were **easy to read**.

4.Production of the model

Finally, we launched the production of the stand, managing the **logistics** with **various stakeholders**: a POS company for the cardboard part, our high school for printing the canvas.

SPONSORSHIP

SPONSORSHIP STRATEGY

To carry out our initiative and participate in the STEM Racing world finals, we were able to count on the support of key sponsors. Our goal was to establish **strong strategic partnerships** in order to obtain both **financial support** and valuable **technical expertise**.

To succeed in **public relations**, it is essential to have a thorough understanding of your audience, customers, and stakeholders. To find sponsors, we avoided sending out mass proposals and instead took a **targeted approach**. This search revealed three main categories :

Small regional businesses: These businesses, often involved in initiatives that benefit the local community, seek to promote their support for local projects in order to enhance their image. Some of them are also direct contacts with whom we have personal relationships.

International companies: Businesses seeking to enter new markets or improve their image through innovative partnerships.

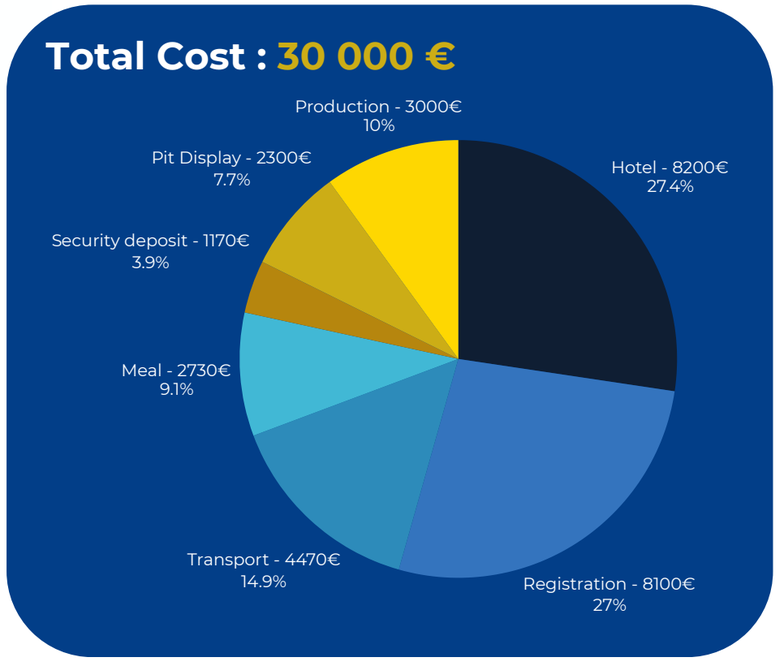

Partners with shared interests: Companies motivated to provide us with services or technical solutions rather than just funding. These partners see our project as an opportunity for collaboration that showcases their expertise.

To succeed, we sought sponsors who were true **strategic partners**. Before contacting them, we assessed mutual benefits and highlighted our value in return. We focused on local companies, businesses with past racing collaborations, and automotive influencers. We prioritized those linked to Formula 1, automotive, technology, and engineering, aligning perfectly with our **project and values**.

PROJECT FUNDING

To ensure **control** and **efficiency** of our resources, we have established a clear and highly **organized budget structure**. This thoughtful approach has allowed us to carefully target our search for partners according to the specific needs of each sector, which in turn helps to significantly **reduce** the overall financial burden. By implementing this strategy, we were able to maintain a strong focus on priorities while ensuring optimal allocation of resources.

Through this structured distribution, we precisely determined the remaining **funding required** for AERIS and effectively identified the **technical sponsors** that were essential for our progress. This method has enabled us to **maximize** the use of available resources, establish a **clear objective**, and guarantee the long-term sustainability and success of the project.

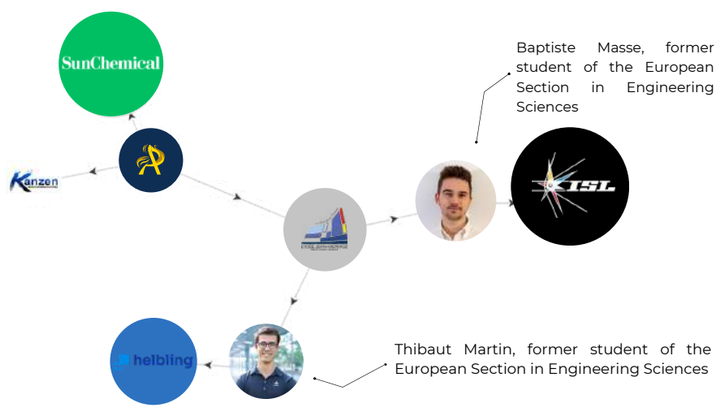

We only need **24 000 €** if we can find **technical sponsors** for the manufacture of the car and the pit layout. This solution is particularly attractive because it not only reduces the financial burden, but also allows us to benefit directly from our partners' expertise and resources.

SOLICITATION STRATEGY

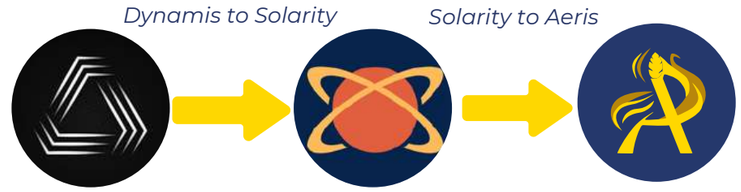

ALUMNIS

From the very start of our outreach, we mobilized the **network** of former participants in the competition, now active in engineering and research. Their **experience** and **contacts** facilitated key technical and industrial partnerships, while also providing us with valuable advice to optimize our project.

HERITAGE

The approach was not limited to creating new opportunities: it followed a path of **continuity**, strengthening the ties built by previous generations of the project. Dynamis and Solarity, our predecessors and national champions, had successfully built **trusting relationships** with key partners, thus ensuring a solid foundation of support.

The strategy focused on **maintaining existing collaborations** to ensure a smooth **transition** and retain long-standing sponsors. OnShape and SunChemical renewed their commitment, reinforcing the project's **credibility** and paving the way for new strategic opportunities.

MAILING

One of the methods we tested to search for sponsors and partners was sending **mass emails**. Concretely, we prepared a **template message** that we sent to many companies likely to be interested in the project, without precise targeting. Each email, accompanied by our **sponsorship offer**, presented the key information about the project as well as the visibility opportunities offered to partners.

ASSESSMENT OF THE EMAILING STRATEGY

However, we concluded that this method was **ineffective** for several reasons. First, the digital format greatly limits the **emotional impact**: unlike face-to-face meetings, it is difficult to convey the seriousness, **credibility**, and commitment of the project through a simple email. Next, the companies contacted were not always aligned with the **values** or the **sector** of the project, which reduced their interest in getting involved. Finally, the **response rate** to this campaign was very

low, showing that recipients were not engaged or convinced enough to take action.

We therefore used this **mass mailing** technique only for the **national finals**, which allowed us to learn valuable lessons from our mistakes. This experience highlighted the importance of a **more targeted** and personalized approach to build strong relationships with partners genuinely interested in the project.

OUR NEW SOLICITATION STRATEGY

Firstly, in our new approach, we sought to truly target companies that might be **interested** in our project. Rather than sending generic messages to general addresses, we took care to contact **decision-makers** directly, searching for their **personal email addresses** or using their professional profiles on **LinkedIn**.

Next, we prioritised direct contact, **calling** companies or organising **face-to-face meetings**. This method proved to be much **more effective**, as it allowed us to directly present our values, seriousness, and commitment. Human contact strengthened trust and gave our approach an authentic dimension.

Thanks to this strategy, we raised over **€7,500**, notably from associations such as the **Rotary Club and the Lions Club**, which were receptive to our project. We also secured an additional **€2,000** by meeting with an advisor from **Crédit Mutuel**, who was convinced by our initiative.

SPONSORSHIP CONTRACT

To strengthen our sponsorship approach and give our project a more **professional image**, we hired a **solicitor** (who wished to remain anonymous) to draft an **official contract** that complied with the legal framework. This document clarified the commitments of each party, specifying the obligations of the team, such as return on investment (ROI), as well as those of the partner company. Thanks to this contract, we were able to establish a **solid relationship** of **trust** with our sponsors, **secure interactions** and ensure the smooth running of the partnership.

Contribution matérielle

Le Parrain s'engage à fournir au Bénéficiaire les moyens matériels suivants :

La remise des dits moyens matériels au Bénéficiaire s'effectue à la signature des présents.

De convention expresse entre les Parties, le présent contrat opère un transfert de propriété des moyens matériels, qui deviendront la propriété du Bénéficiaire à compter de leur délivrance.

Pendant toute la durée du présent contrat, le Parrain aura la charge de l'entretien, de la maintenance et des réparations des moyens matériels.

Il se charge en outre de souscrire toutes les assurances nécessaires à leur utilisation, ou demandées explicitement par le Bénéficiaire via e-mail ou lettre recommandée.

La valeur globale de la contribution en nature du Parrain est estimée par les Parties à _____€ (_____ euros TTC).

ARTICLE 4 - OBLIGATIONS DU BÉNÉFICIAIRE

Réalisation du Projet

Le Bénéficiaire s'engage à participer à l'événement visé par le Projet.

Il est responsable de son inscription régulière.

Il s'engage à accomplir toutes les formalités, démarches et/ou contrôles nécessaires, et à se conformer à toute réglementation ou législation applicable dans le cadre du concours ARAMCO STEM RACING WORLD FINALS 2025 (F1 In Schools World Finals).

Il devra fournir au Parrain, sur simple demande de sa part, un état récapitulatif des dépenses réalisées pour l'avancement du Projet, accompagné des justificatifs afférents.

SPONSORSHIP DOCUMENT

In order to make our offer easier to **understand**, we have designed a **clear** and **structured** sponsorship package. We have opted for simplicity, as sponsors prefer concise and direct proposals rather than having to navigate complex categories.

PRIORITIZATION

To ensure our sponsors receive visibility commensurate with their commitment, we implemented a transparent and fair **classification system**. This **prioritization** allows us to structure our partnerships according to their financial and technical contributions, ensuring an optimal return on investment for each.

Our partners are divided into two main categories:

Financial Sponsors: Those who provide direct monetary support, promoting our growth and ensuring a lasting collaboration.

Technical and Support Sponsors: Those who provide material resources, technical guidance, or high-value services. Their expertise helps us overcome challenges and enhance our offerings by fostering innovation and collaboration.

Some sponsors combine both approaches, and in such cases, we consider their overall contribution to determine their classification.

Our sponsors are divided into **four levels**, each corresponding to a minimum contribution threshold, whether in direct **funding or in equivalent value provided**.

The classification of contributions is not based solely on financial criteria. Every contribution monetary, material, technical, or strategicis evaluated according to its real impact on the project. This system ensures recognition **proportional** to each sponsor's involvement and added value, regardless of the nature of their commitment.

BENEFITS	BRONZE + 500 €	SILVER + 1000 €	GOLD + 2000 €	PLATINUM + 3000 €
Mention on social media	✓	✓	✓	✓
Mention on the website		✓	✓	✓
Logo on merchandising			✓	✓
Logo on the car				✓

RETURN ON INVESTMENT

At AERIS, we view sponsorship as a **mutually beneficial exchange** of value. Our approach is based on a fundamental principle: each partnership must be structured around a **clear**, **measurable** return on investment that aligns with our sponsors' objectives.

Rather than applying a rigid model, we have developed a **dynamic strategy** where each sponsor receives a return proportional to their **commitment**. This system allows us to provide visibility and opportunities tailored to the specific needs of each partner, thereby ensuring a lasting and **impactful** collaboration.

PRESENCE ON **OUR SOCIAL MEDIA AND WEBSITE**

- **Official announcement of the sponsor** to mark the start of the collaboration.
- Dedicated **posts presenting the sponsor** and their involvement in our project.

Content collaborations for major partners, including videos, case studies, and engaging activations.

PRESENCE ON **MERCHANDISE**

- Providing strong **physical visibility** through our merchandise.
- The team's **official polos**, worn during events and competitions.
- The positioning and size of the logo vary according to the **sponsor's tier**, ensuring exposure proportional to their commitment.

SPONSORSHIP

PRESENCE ON **THE PIT DISPLAY**

- The pit display is the nerve center of our competition presence, a key space where we welcome judges, visitors, and partners.
- Direct exposure to competition stakeholders (judges, other teams, spectators).
- Strong visual integration within the F1 in Schools environment, reinforcing the association between the sponsor and technological innovation.

PRESENCE ON **THE CAR**

- The ultimate benefit reserved for our most committed sponsors is the presence of their logo on our race car.
- Exposure during races and testing phases, captured in photographs and broadcasts.

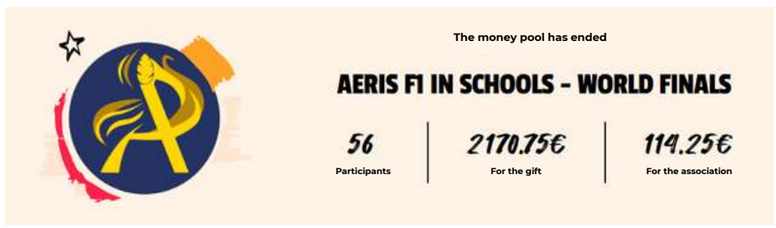

- Integration into the team's communication materials, where the car is highlighted.
- We optimize logo placement by analyzing the most common camera angles.

SETTING UP A FUNDRAISER

From the beginning, we decided to set up an **online fundraiser** so that anyone wishing to **support** our project could do so easily. For this, we chose to use the website **Tribee**, which allows the creation of fundraisers.

We opted for Tribee because this platform does not take any commission: the usual fees, approximately **5%** of the total amount, are entirely **donated to a charity**. This solidarity-based approach fully aligns with our team's **values**.

Thanks to this fundraiser, we were able to raise around **2 100 €** from **56 participants**.

MAINTAINING SPONSOR ENGAGEMENT

We implemented an **effective communication strategy** to keep our sponsors and partners informed of our **progress** and to strengthen our **collaboration**.

To ensure optimal **follow-up**, we adopted an approach based on **transparency** and **closeness** with our sponsors. We set up various communication **channels** to keep them **updated** on the project's development and to tangibly demonstrate the **value** of their **commitment**.

***In-Person Meetings**: Whenever it is possible to travel or host our partners, we prioritize face-to-face interactions. These meetings allow us to build trust, explain our progress in detail, and discuss potential opportunities for deeper collaboration.*

***Calls and Video Conferences**: When in-person meetings are not feasible, we stay in touch through phone calls or video conferences. This allows us to maintain a direct relationship with our sponsors and adapt our communication to their availability.*

***Newsletters**: We regularly send newsletters to our sponsors to share the highlights of our project. These include updates on our progress, information about upcoming competitions, and features showcasing the partners who support us.*

The attached photos show the **final ceremony** we organized at the conclusion of the French Championship. On this occasion, we invited all the **partners and sponsors** who supported us throughout this journey. This special moment allowed us to express our **gratitude**, share the results achieved, and **strengthen the relationships** developed over the course of the project.

Thanks to these **strong relationships** with our **partners**, certain companies have agreed to continue supporting us for the STEM Racing championships, such as ISL, Lycée Jean Mermoz and SunChemical. Their **renewed commitment** is a true mark of **recognition** for our work and **professionalism**. It demonstrates that our project has won people over with its consistency, ambition and educational and technological impact. Beyond material and financial support, these contributions send a strong signal that **encourages us** to go even **further**.

Type of Support: Technical, Material

Tier: Platinum

The partnership with ISL showcases the close link between our Business and Engineering Divisions.
Through targeted negotiations, the Business team secured access to ISL's **high-precision** facilities, allowing our engineers to machine the chassis and wheels of our car with remarkable accuracy.
This collaboration transformed a sponsorship into a true **technological advantage.**

Type of Support: Technical

Tier: Gold

Our work with Ansys highlights how Business strategy directly supports Engineering innovation.
The Business team obtained access to **Ansys Fluent** and **Ansys Discovery**, enabling our engineers to simulate airflow, analyze aerodynamics, and validate every design choice with high precision.
A partnership where technology and strategy move forward together.

Type of Support : Financial

Tier : Platinum

The **Rotary Club** plays a vital role in supporting both local and international initiatives, especially those led by **young people, associations, or teams in their early stages**. Thanks to its network of committed members and well-established structure, Rotary provides tangible and strategic support to emerging projects. As part of our development, the Rotary Club granted us funding of **€5,000**, demonstrating their trust in our project.

Type of Support: Financial

Tier: Platinum

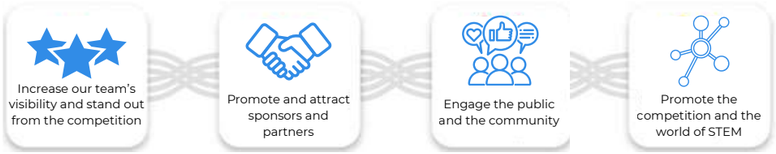

The **Saint-Louis Agglomeration**, a public entity committed to local development and innovation, provided valuable support for our project. By supporting us through its initiatives for youth and impactful projects, this institutional partnership offered not only financial assistance but also official recognition, strengthening our credibility with other partners.

Our sponsorship strategy has been a complete success: we have achieved our **financial objectives**, raising the **24 000 €** we needed, and have secured **technical sponsors** for the manufacture of the car and the pit area. We even have a **margin of €500**, providing additional security for the project and highlighting the effectiveness and relevance of our approach.

MARKETING

MARKETING GOALS

In a project like **STEM Racing**, success does not rely solely on technical performance. A strong **marketing strategy** is equally essential to structure our **communication**, capture the attention of our **audience**, and strengthen the connection with our **supporters** and **partners**, while giving our team a **cohesive and professional image**. It allows us to build an engaged community, highlight our actions and sponsors, and lay the groundwork to achieve our objectives in terms of **visibility**, **influence**, and long-term **growth**.

Our strategy is built on a clear **ambition**: to increase our team's **visibility** and **stand out** from the competition. We are developing a strong identity and staying active across communication channels. By creating a **distinctive image** and sharing our progress, we strengthen ties with our **community** while attracting new supporters.

This visibility also benefits our **sponsors**, whose support we highlight with optimal exposure, while we seek new **partners** to help us grow. Standing out is not only strategic but also a way to affirm our **uniqueness** and generate real **interest**.

But visibility alone is not enough: **engagement** is central. We involve our audience through social media, behind-the-scenes content, and **events** that bring our project to life, turning followers into true **ambassadors**.

Beyond the competition, our **mission** is to share our **passion**. We want our story to **inspire** other young people to embrace challenges and explore STEM Racing. By **promoting** science, technology, engineering, and mathematics, we highlight our skills while encouraging the **next generation** to get involved.

ESTABLISHING A TARGET AUDIENCE

One of the core principles of Aeris is its ability to reach everyone, regardless of their interest in Formula 1. Our marketing strategy is based on creating a diverse and engaged community, where everyone, whether a motorsport enthusiast or completely new to the field, can connect with our vision and values. Clearly defining our target audience allows us to:

- **Maximize our impact** by tailoring our communication to the specific expectations of each segment.
- **Expand our influence** beyond the circle of Formula 1 enthusiasts by making our project accessible and inspiring.
- **Deliver value to our sponsors** by providing them with a qualified and diverse audience.

Audience section	Attributes	Approaches	Effect
Young people and students	• Age: 12–24 years old • Local • Interested in innovation and technology	• Dynamic and interactive content • Popularisation of technical concepts	• Inspiring the next generation • Attracting talent • Democratising access to competition
Motorsport enthusiasts and those already familiar with STEM Racing	• Age: 15–35 years old • Worldwide audience • Engaged in the world of motor racing, STEM Racing and related technologies.	• More technical approach • Performance highlighting • Collaboration with recognised individuals linked to F1	• Promote more in-depth content • Establishing our credibility • Engaging the interest of the community already involved
General public	• All ages • Local and national • From all walks of life, all backgrounds and diverse interests	• Simplified communication • Inspiring storytelling • High-impact visuals	• Raise awareness about competition • Reaching a population unfamiliar with the project • Developing an emotional attachment
Companies and sponsors	• Age: 35 years and older • National and international • Manager, Head of Communications, Marketing, HR	• Professional communication • Progress reports • Return on investment	• Building loyalty among our partners • Strengthening our credibility • Attracting new sponsors

MARKETING BUDGET

We have adopted a rigorous approach to managing our **marketing budget** in order to optimize costs and maximize the impact of our actions. Rather than dedicating a large portion of our budget to traditional media, which can be used for free, we have chosen to invest **1 000 €** in concrete initiatives such as **team merchandising**, the **pit display**, and certain **events**, which has allowed us to **preserve more funds** for the rest of the project.

PRESS

Following our spectacular victory at the national finals, our team had the immense privilege of being **featured in L'Alsace**, the main regional newspaper, which **contacted us** to write an article about our project. This publication allowed us to reach a **more targeted audience**, composed of local readers interested in education, innovation, and scientific projects. This impact has been particularly valuable for our **regional partners and sponsors**, for whom local visibility is more relevant than national coverage. Being featured in the regional press allows them to directly see the effect of their support while highlighting their commitment to educational and innovative projects like STEM Racing.

Saint-Louis

Des élèves du lycée Mermoz visent une finale mondiale à Singapour

Les élèves de la section européenne Sciences de l'ingénieur du lycée Mermoz ont à nouveau remporté le championnat de France F1 in schools grâce à un prototype miniaturisé. Ils vont donc représenter la France lors de la finale mondiale à Singapour, cet automne. Ils lancent un appel à sponsors et mécènes pour financer ce déplacement, estimé à 30 000 €.

Annabelle Jérémie – 07 avr. 2025 à 19:19 – Temps de lecture : 2 min

REPORTAGE

After this article, our team also had the opportunity to share our journey in a television report on **France 3**, one of France's main public television channels. This television appearance provided an **exceptional opportunity** to showcase our project, our **passion for STEM Racing**, and the **hard work** of the entire team to a much wider audience than we could have ever imagined. The cameras captured our energy, enthusiasm, and commitment, bringing our **story** to life and demonstrating how innovation, creativity, and team cohesion can lead to remarkable results. This moment also helped to strengthen our **visibility**, attract the attention of **new partners and sponsors**, and inspire the next generation of young talents to take on ambitious and challenging projects.

INSPIRING FUTURE STEM RACING PARTICIPANTS

During our high school's **open house days**, our team had the opportunity to present our project and highlight our school's participation in the STEM Racing competition. This event was a chance to show **future students** what they could achieve and give them an insight into the opportunities offered by the program. We also shared our experience as participants in this international competition and explained how upcoming generations could benefit from our journey. We invested in an **advertising space** on a bus stop in front of our school with Girodmédias. This helped us reach not only our classmates, but also **students from the neighboring school** and passers-by.

DIGITAL MEDIA

USING SOCIAL MEDIA

An effective digital strategy goes far beyond simply having an online presence. Each platform has its own **characteristics**, **codes**, and **audience**, which require tailored approaches. To ensure maximum reach, we have adopted a segmented approach that considers both **B2C (Business-to-Consumer)** and **B2B (Business-to-Business)** audiences. This allows us to optimize our influence, engaging both consumers and key industry stakeholders effectively.

The selection of platforms was carefully made. Through a detailed **analysis of our audience** and **engagement trends**, we identified the channels most likely to capture attention, enhance our visibility, and maximize the impact of our communications.

SELECTION OF **SOCIAL PLATFORMS**

We began by analyzing the main social media platforms to understand their specific features and identify those best suited to our strategy.

Instagram: visual and engaging, perfect for building a strong brand identity.

LinkedIn: professional, ideal for B2B and sponsor outreach.

TikTok: viral and creative, great for reaching younger audiences.

YouTube: long-form content, useful for in-depth storytelling.

Facebook: effective for building a broad and loyal community.

Twitter (X): fast and reactive, ideal for announcements and industry monitoring.

Although we know that being present on multiple social media platforms allows us to reach a **wider** and more **diverse audience**, we made the decision to focus our efforts on Instagram and LinkedIn due to **limited human resources**.

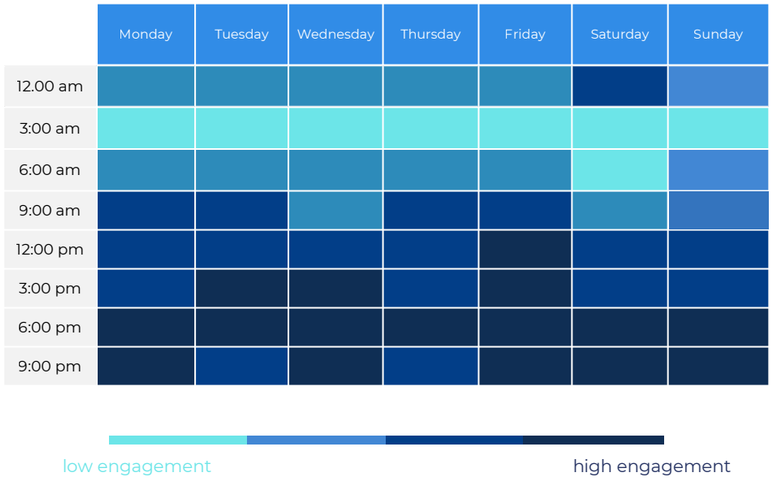

This choice allows us to build strong, well-developed channels:

- On Instagram, we've created a **clear visual identity** and built an **engaged community** through creative and consistent content.
- On LinkedIn, we've strengthened our **network** and **visibility**, connecting with **professionals** and showcasing the ambition and credibility of our project.

By concentrating on these two platforms, we ensure a **coherent** and **effective** digital presence, while optimizing our **time** and **impact**.

ADJUSTING POSTING TIMES BASED ON AUDIENCE BEHAVIOR

MOST ACTIVE PERIODS OF OUR SUBSCRIBERS ON INSTAGRAM

The planning of our posts is a direct extension of our digital strategy. A successful publication is not limited to its visual or editorial content it also depends on **when it is shared**. By carefully structuring our content calendar, we ensure that each post **reaches our target audiences** during their most engaging time windows, maximizing visibility and impact.

With a strategy implemented in October, resulting from our careful planning beforehand, AERIS is positioned as the **first team nationally to have initiated a genuine marketing strategy** even before the official start of the competition. This foresight has enabled us to establish ourselves as a **benchmark** in communication, while strengthening our credibility with sponsors, the public and the F1 in Schools organisation.

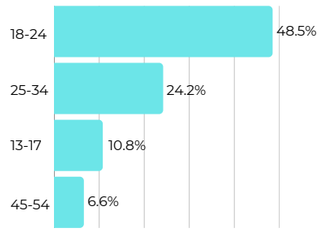

LinkedIn
Post once a week on Mondays at 6 p.m.

Instagram
Posts or reals twice a week on Wednesdays and Fridays at 6 p.m.
Stories for each post and spontaneous ones

These schedules, defined according to the platforms, determine our **weekly planning** to establish our online presence. It is constantly evolving to adapt to the behaviour of our audience. By analysing performance via **Meta Business Suite**, we have adjusted our slots to reach our audience at key moments, thereby maximising our **reach and digital impact**.

AUDIENCE AGE

Main Age Groups of Our Instagram Followers

Understanding the **age distribution** of our **audience** is essential for tailoring our communication strategy. It allows us to **adjust** the tone, style, and timing of our posts according to the expectations and habits of each age group.

COMPETITIVE ANALYSIS

To strengthen our digital strategy and identify key areas of differentiation, we conducted a comprehensive comparative analysis of our competitors. This approach allowed us to better understand the dynamics of the sector, audience expectations, and the most effective practices in online communication.

We examined **key indicators** such as:

- Follower count across Instagram, LinkedIn, and other relevant platforms
- Posting frequency and content regularity
- Engagement rate (likes, comments, shares)
- Preferred content formats: visual, video, storytelling, institutional...
- These insights helped us identify the most engaging formats and the most effective posting times

During our analysis, we observed that some accounts we were **comparing** ourselves to displayed **abnormally high statistics**, particularly a sudden and significant increase in follower count. These fluctuations, often not linked to a rise in engagement or any identifiable communication campaign, suggest artificial growth.

This observation allowed us to put certain **comparisons** into perspective and reinforced our **commitment** to an organic growth strategy, based on genuine engagement, **consistent posting**, and **high-quality** content. It also highlights the importance of prioritizing qualitative indicators (engagement rate, authentic interactions) over purely **quantitative metrics**.

PORTFOLIO ENTERPRISE

DIGITAL MEDIA

WEBSITE

The AERIS digital platform has become a cornerstone of our **marketing strategy**, elevating our brand visibility far beyond the boundaries of our local community. Built with a seamless user experience and a bold **visual identity**, the site functions as both a storytelling hub and a sponsor showcase an essential tool in **demonstrating our professionalism and international appeal**.

AUDIENCE & GEOGRAPHIC INSIGHTS

Global Footprint: Thanks to targeted social media campaigns and strategic cross-platform promotion, our website now attracts visitors from over 40 countries.

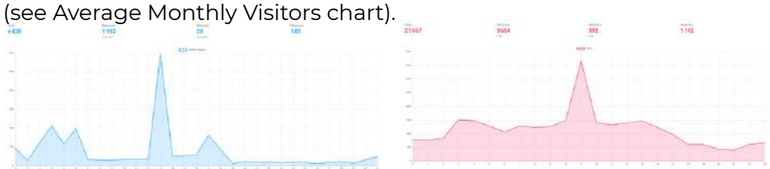

Three-Border Epicenter: The highest concentration of traffic originates from the **tri-national** region surrounding **Basel**, spanning **France, Germany, and Switzerland**, perfectly aligning with our team's home base.

TRAFFIC DYNAMICS

Monthly Reach: Visitor numbers have maintained a steady upward trend, with a current monthly average exceeding **1000 unique visits** (see Average Monthly Visitors chart).

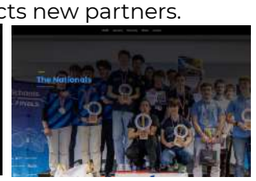

Peak Engagement Hours: Analytics reveal two key engagement windows 12:00–14:00 matching optimal social-media sharing periods (see Hourly Traffic Peaks graph).

MARKETING VALUE FOR PARTNERS

Our website's structure directly serves sponsor visibility and brand storytelling:

- **Tiered Sponsor Pages (Platinum, Gold, Silver, Bronze)**: Dynamic profiles and logos give partners prime exposure to an international audience.
- **Media Hub**: Centralized access to our social channels drives traffic across platforms, multiplying impressions for sponsor content.
- **National Achievements Page**: Documenting our French National Final highlights not only our competitive success but also the credibility that attracts new partners.

INSTAGRAM

Key Performance Indicators (KPIs)

57 283 views · 60 reactions · 1018 followers · 54 posts · 2'563 interactions

Instagram has become the cornerstone of our digital communication, fostering an engaged audience and a distinctive visual identity. The platform enables us to share diverse content with ease and reach a broad audience. Since our launch in October 2024, we have taken a **proactive approach**, posting consistently to establish a strong **online presence** well before the start of the competitions.

Signature Content: A balanced mix of behind-the-scenes engineering insights, high-definition car renders, competition highlights, and sponsor spotlights keeps our feed both informative and visually compelling.

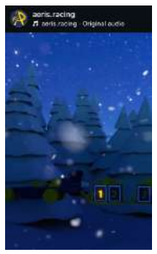

FLAGSHIP INITIATIVES

Advent Calendar Campaign: Throughout December, we launched a **24 day digital countdown to the holidays**. Each day unveiled a fresh piece of content ranging from exclusive car design previews and short engineering clips to behind-the-scenes anecdotes and interactive polls. This sustained, daily rhythm not only boosted follower retention but also increased average story views by over **40 %**, creating anticipation and a sense of shared celebration.

Exclusive Giveaways: Strategically timed contests featuring branded merchandise and limited-edition team gear generated significant spikes in reach and follower growth. Each giveaway required actions such as sharing posts, tagging friends, or answering technical trivia, effectively amplifying organic reach while strengthening **sponsor visibility**.

Interactive Stories & Quizzes: Our story-based polls, **Q&A** sessions, and competition-themed quizzes transform passive viewers into active participants. From predicting race outcomes to answering engineering challenges, these interactive elements consistently deliver **engagement** rates well above platform averages, fostering a genuine two-way dialogue with our audience.

LINKEDIN

Key Performance Indicators (KPIs)

10 664 views · 341 reactions · 63 followers · 20 posts · 1'259 interactions

In a digital world, LinkedIn is essential for AERIS, with a focus on the professional sector and the facilitation of **connections with companies and decision-makers**. It plays a key role in our **B2B strategy**, providing access to sponsors and collaborative opportunities. As an emerging project, **LinkedIn** has strengthened our legitimacy and credibility, positioning us at the heart of the **professional ecosystem** and opening doors to **strategic partnerships**.

Our development strategy on LinkedIn relied on a key asset: the **alumni network**. By definition, alumni are former students and members of an institution, often now professionals active in various sectors. By mobilizing this network, we built a strong foundational audience, allowing us to expand our influence among **companies and sponsors**. This approach provided immediate and targeted visibility, ensuring our content reached individuals with a direct **interest in our project**.

On LinkedIn, our editorial line focuses on the **professional world**, with posts highlighting expertise, projects, and sponsor engagement. We share analyses and testimonials to ensure credibility. A formal, institutional tone has improved sponsor ROI by optimizing their **visibility** and showcasing their **commitment**.

LinkedIn's algorithm promotes content distribution, with each interactionsuch as a like expanding visibility to the user's network. Unlike Instagram, LinkedIn enables an exponential spread of influence, increasing exposure to a **professional audience.**

A striking example is the "like" from **Neil Barua, CEO of PTC**, on one of our posts. While it may seem minor, its impact was significant: with over **100,000 professionals following** him, our post was exposed to a strategic audience, driving more visits and strengthening our credibility within the industry. This example highlights the **power of LinkedIn**, where a single interaction can have a major effect.

SUSTAINABILITIY

GOALS

Today, environmental protection is no longer an option but a necessity. Faced with environmental challenges, every project must **adopt a responsible approach**. It is not just a question of limiting our impact, but of **rethinking** our methods to **innovate sustainably**. That is why we have set ourselves several objectives to transform the way we innovate and develop:

- **Become aware** of the concrete impact of our project on the climate.
- **Limit our carbon footprint** as much as possible, taking into account performance, time and budget constraints.
- **Taking action to protect the environment** in order to raise awareness among our audience about ecological issues.

ESTIMATION OF OUR CARBON FOOTPRINT

Before we can do anything about the environmental impact of our project, we need to **understand** it, and that means **estimating our carbon footprint**. To do this, we based ourselves on a number of datas provided by the **official French government website**.

Category	Emissions (kg CO_2)
Production	0,2645901
Logistics	249,6
Competition transport	2987,146286
Use of machinery	1,7225
Total	**3238,785376**
Number of trees required to offset	**129,551415**

This table shows that air travel alone accounts for **more than 92% of our project's CO_2 emissions**. It is therefore the priority category to reduce. But 3,239 kg of CO_2 doesn't really speak to everyone. To better visualise the environmental impact, we calculated how many **trees we would need to plant** to absorb these emissions in one year: **130 trees**, which is huge.

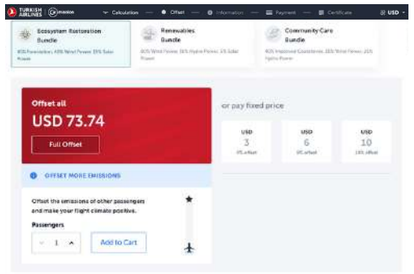

REDUCING OUR CO_2 EMISSIONS

To reduce our CO_2 emissions, we have adopted three strategies:

- **compensate** for those related to **transport** via an airline
- **compensate** for those related to **the rest** of the project **by our own means**
- **mitigate our emissions** through **technical analysis** of the environmental impacts of our development choices

Choice of airline:

Reducing the CO_2 emissions linked to transport to Singapore is a **real challenge**, especially with budget and time constraints: as the competition is taking place **during our studies**, we couldn't devote several weeks to travelling by train without risking missing our classes. So flying was our **only solution**.

However, the choice of travelling with a more or less **eco-responsible airline** was still in our hands, so we took it into account. After studying the airlines that respected our constraints, one stood out: **Turkish Airlines**. It was the only one to provide a **transparent estimate of CO_2 emissions** and to offer a **supplement to offset** our flight via various **initiatives** (forestation, renewable energy, etc.). So we opted for this solution, **at a cost of $73.74**.

Partnership with Leihouse Farm:

To offset our transport-related CO_2 emissions, we were obliged to use Turkish Airlines. But it was important to us to take **personal action** by **planting trees**. Why do it ourselves? It allowed us to show our commitment to our community, particularly through a **real Instagram**, and to ensure that the trees would actually be planted, unlike some **greenwashing initiatives**.

So we set up an unusual partnership with a **local farmer** and his farm, Leihouse Farm. We were able to visit the farm, **plant 10 trees** with him and **discuss the environmental issues** involved in producing and transporting produce.

A responsible web host:

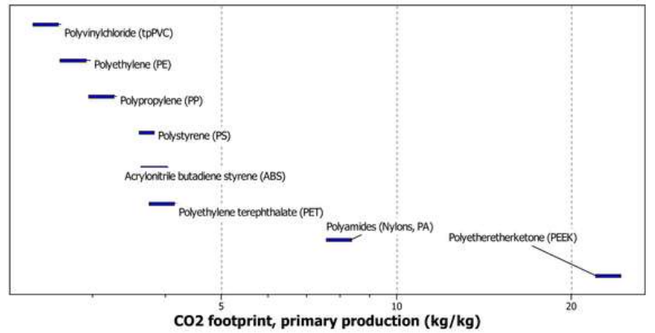

Among our CO_2 emissions, we couldn't overlook our **website hosting**. It is a real asset for digital communication, but also **generates CO_2**. To **compensate** for this, we chose **Infomaniak**, a hosting company committed to the environment, which **offsets** all its **emissions by 200%** by funding various initiatives.

Limiting our emissions through the choice of materials:

Because the environment is not just a matter for the enterprise division, we have integrated a **strategic approach** to reducing CO_2 emissions into the **engineering division**.

For example, we have compared the **emissions linked to the different materials** used to produce our car, using **Granta EduPack** software and chosen from those with the **lowest impact**.

RAISING AWARENESS OF ENVIRONMENTAL ISSUES

Combating climate change requires a **collective effort**. That's why we've tried to **raise awareness of environmental issues** among those around us. With a school near us in Germany, we organised a **conference** on innovation and the technical aspect: the '**Klimastaffel**'.

We presented the solutions we had explored to make a technical project **more sustainable** and **eco-responsible**. We also ran a short **workshop** to teach the students how to model a Formula 1 mini-model. And finally, the event concluded with an **enriching discussion** on various eco-responsible solutions that can be applied to everyday life.

What's more, to **encourage other young people** to take part in this kind of initiative, we shared our experience on a **real Instagram** page, at posting in featured the side dynamic of this initiative.

Finally, we had the chance to take this project to the next level by presenting it to the **European Parliament** with other students our age.

PORTFOLIO ENTERPRISE

SELF-EVALUATION

TEAM IDENTITY

Acquisition

From the very beginning, our **focus** was on **acquiring a clear and strong visual identity** for AERIS. We carefully selected a **color palette** and logo that were not only visually appealing but also versatile and easy to implement across all platforms. The choice of **blue and yellow** created a **vibrant** yet harmonious combination that **reflected** our team's **energy** and **values**. Simultaneously, we defined the core philosophy of the team **innovation, performance, and teamwork** which became the foundation of our storytelling and overall identity. This early acquisition of a coherent brand allowed us to build a strong sense of purpose and direction from day one.

Execution

Once our visual identity and philosophy were established, we executed it consistently across all materials. **Merchandising, social media content, and presentations** were all designed **in alignment** with our **brand**, creating a **professional** and cohesive image. Our **storytelling strategy** successfully communicated the team's values, both internally and externally, strengthening engagement and presenting AERIS as a **credible and aspirational STEM Racing team**. This execution contributed directly to our visibility and, ultimately, to our achievement as French champions.

Improvements

Despite these successes, **several areas** could have been improved. Firstly, the **absence of a formal brand guideline** occasionally led to inconsistencies in certain materials. Secondly, our **competitive analysis was limited**; a more systematic benchmarking of other teams' identities could have highlighted opportunities to differentiate ourselves earlier. Finally, the **adaptation of our identity over time** was somewhat reactive. As the team evolved and new partners joined, updating our materials and messaging could have been more proactive to maintain cohesion and maximize impact.

SPONSORSHIP

Acquisition

One of the **core strengths** of our sponsorship approach was the **energy and personal investment** every team member brought to the project. Each of us **dedicated** significant **personal time** to calculate and estimate the overall cost of the project. This **rigorous preparation** formed the backbone of our sponsorship strategy, giving us credibility when approaching potential partners. By combining **careful planning** with a clear vision of the **team's needs**, we laid the groundwork for a structured and persuasive sponsorship **approach**.

Execution

The execution phase was marked by hands-on, in-person sponsor engagement, which proved extremely **effective**. **Meeting potential sponsors face-to-face** made a tangible difference, it's much harder for them to refuse a proposal in person than over email. This direct approach allowed us to establish **trust**, communicate our **ambition**, and demonstrate our **professionalism**. Moreover, this experience was not only valuable for the team's success but also highly could **educational**: it allowed each member to develop essential real-world skills, including **negotiation**, **presentation**, and **relationship-building**, which extend far beyond the competition context. The overall outcome was a well-supported project that combined technical ambition with financial feasibility.

Improvements

Despite these successes, there are areas where our sponsorship efforts could have been stronger. Firstly, **alumni engagement** could have been expanded. While we successfully leveraged alumni for technical support and some introductions, a more systematic use of their networks could have unlocked **additional strategic partners** and **financial opportunities**. Secondly, while our budget estimates were precise, resource allocation for sponsorship activities could have been optimized. For example, dedicating more time and materials to high-potential sponsors, preparing personalized presentations, or leveraging more creative outreach methods could have increased **engagement** and **conversion rates**.

MARKETING

Acquisition

One of our **key achievements** in marketing was the rigorous **identification** of our **target audience**. By understanding precisely who we wanted to reach prospective **students, school partners, and local sponsors** we were able to design campaigns and presentations that resonated effectively. This foundation allowed us to **structure our communication** around the team's values and achievements, ensuring every interaction had a clear purpose. Furthermore, we actively pursued media exposure, securing coverage in school publications, local newspapers, and participating in interviews.

Execution

Our **marketing execution** focused on direct **engagement and event participation**. We attended open houses, school fairs, and other events, **presenting** the **AERIS** project and team in a **professional and inspiring way.** These efforts showcased our **technical achievements** while highlighting the team's philosophy of innovation, teamwork, and excellence. By emphasizing these aspects, we **attracted attention** from potential sponsors and inspired future students, strengthening both the team's and the STEM Racing's image.

Improvements

Despite our successes, there are areas for improvement. We could have **expanded** our **presence** at more regional or STEM-focused events to reach a broader audience. Our **promotional** materials though coherent could have been more diversified and tailored to different **stakeholders**, such as sponsors and parents.

DIGITAL MEDIA

Acquisition

We successfully developed our presence on key social networks, including LinkedIn and Instagram, **creating** a strong team identity through our posts.

Execution

We built an **engaged** community quickly and **launched a website** that supported sponsor visibility and highlighted our uniqueness compared to other teams.
Improvements

Improvements

Despite these successes, we could have improved **content diversity** and interaction, for example by adding more behind-the-scenes posts or **interactive features** to strengthen engagement further.

SUSTAINABILITY

Acquisition

We were proud to **identify** concrete **solutions** to **minimize** our **carbon impact**, integrating sustainability into the core of our project.

Execution

We carried out **meaningful actions**, such as planting **trees at the Leihouse** farm, participating in the **"Klimastaffel"**, and even representing the team at the **European Parliament**, showcasing our commitment beyond the competition.

Improvements

Limited time prevented us from fully expanding these initiatives. With more planning, we could have implemented additional sustainability measures or campaigns to further reduce our environmental footprint and involve a **broader audience.**

HUMAN ADVENTURE

Above all, what we are **most proud** of is that this **experience** became truly a **human adventure**. Beyond the technical achievements and strategic work, every team member was able to push their limits, grow personally, and gain unforgettable experiences. The **journey taught** us resilience, collaboration, and how to face challenges together, all while sharing moments of joy, laughter, and creativity.
The **most memorable** part was not just the competition itself, but the bonds we built and the shared **sense of achievement**. From long brainstorming sessions to celebrating small victories, every moment contributed to a stronger, more united team. And yes, some of our most **iconic team memories** are captured **around a pizza**, proof that great teamwork sometimes happens over the simplest things, and that above all, this was an exceptional human adventure.

AERIS
